Flipcam is a recording app that allows you to record to your own video or audio in Mac OS X. The application is a very straightforward one, with a user-friendly interface. It offers a lot of options, and its ease of use should make it a favorite for both beginners and experienced users. Flipcam is well-known for its simple interface. The app has a big and intuitive interface and is very well organized. The user-friendly interface does not allow users to make mistakes. You can’t miss an important setting. Besides, the app’s interface is a bit lengthy, so it can be considered a drawback. For users to be able to use the app, they have to learn a few basics. You can skip the app’s basic tutorial by tapping on the “Learn How” button. The app has a recorder that lets you select the time at which you want to record and the location from which you want to record. You can also customize the look of the recording by changing it’s resolution, frame rate, bitrate, colors, deinterlacing and others. Flipcam can record audio or video. With its audio recorder, you can record up to eight channels at the same time, while with the video recorder you can record up to two. This app can record videos up to one hour and videos or audio up to eight hours. The app’s audio recorder is the best in terms of design and simplicity. It lets you choose the frequency for recording. For example, it lets you choose whether to record at 48KHz, 96KHz, 48kHz or just the original frequency. You can record either in linear or 24-bit audio or both at the same time. You can also customize the recording with a full range of options. The video recorder has a number of settings and, as such, it isn’t the simplest one out there. For example, you can choose to record in any format from AVI to MOV. However, it is a little bit complicated when it comes to recording videos in HD formats. You can choose the output format, and the possible resolutions are from 320×240 to 640×480. Another problem is that there is no option to record multiple videos at the same time. This app supports the three major operating systems: Mac, Windows and Linux. When it comes to price, you can get Flip

A few basic functions that turn your mouse or trackpad into a powerful yet easy-to-use video recording and capture application.
