In October 2011, AutoCAD released AcroLisp a proprietary programming language based on Lisp. Windows Autodesk UX Designers have a number of add-ons for AutoCAD. AutoCAD for Mac is a port of AutoCAD for Windows. It is sold as a separate product, or can be bundled with AutoCAD for Windows, with a single login. Mac OS X 10.5 and newer provide an Xcode-based interface for developing Xcode Cocoa applications. AutoCAD for Mac 1 was released in June 2002. It has been rebranded several times: AutoCAD 2006 (formerly AutoCAD LT) AutoCAD 2008 (formerly AutoCAD Standard) AutoCAD 2009 (formerly AutoCAD R14) AutoCAD 2010 (formerly AutoCAD LT) AutoCAD 2011 (formerly AutoCAD Standard) AutoCAD 2012 (formerly AutoCAD R13) AutoCAD 2014 (formerly AutoCAD LT) AutoCAD 2015 (formerly AutoCAD LT) AutoCAD 2017 (formerly AutoCAD Standard) AutoCAD 2018 (formerly AutoCAD LT) AutoCAD LT 2019 (formerly AutoCAD Standard) During the 13 years between the release of AutoCAD 2003 and the release of AutoCAD 2017, many modifications to the product have taken place, including a shift to 64-bit software and significant improvements to speed, functionality, and usability. The original release of AutoCAD introduced a lack of true multi-threading as users often experienced inefficiencies using single threads. In 2003, AutoCAD was not a true 64-bit product, and instead ran in compatibility mode with a few exceptions. This can still be problematic with some 32-bit applications, such as 32-bit Office applications and some image editing and other applications, such as Windows Photo Viewer. The 64-bit version of AutoCAD removes this compatibility mode, allowing more efficient use of all cores and improved performance. Users can also develop plug-ins, or add-ons, for AutoCAD. Such add-ons can be for use as complementary tools to AutoCAD or for use in Autodesk's own products. In Autodesk's 2013 IPO filing with the Securities and Exchange Commission, the company said it had more than 4 million registered users of the product. Autodesk revenue in 2018 grew to \$4.1164740b
