The first program had the subtitle "a structural CAD program for architects, engineers, and draftsmen" and included drawing, editing, and project management features. It supported Windows 3.1, OS/2 and DOS platforms. A product brochure for AutoCAD,

---

which was released in 1981, advertised the ability to create 2D drawings up to 5 megapixels, 3D drawings, and professional-grade printed output. The first release of AutoCAD for Apple Macintosh users supported Macintosh 1.1.0 through Macintosh 1.3. The original AutoCAD used a proprietary file format and rendering engine. In 1990, Autodesk published a developer's API (application programming interface) for the Windows 3.1 platform that enabled third-party

---

developers to integrate their own objects, tools, and rendering engines into AutoCAD. Autodesk and third-party developers eventually created various open-source rendering engines for AutoCAD. A number of features in the early releases of AutoCAD were significantly lacking.

According to Autodesk, the "Concept" feature in the 1982 release was the first system to incorporate the idea of "objects." Around the same time, Autodesk began developing a 2D technical

---

drawing software application called Draw. This was a concept-based application and was the forerunner of other 2D technical drawing applications Autodesk released such as Advance Drawing, Mechanical, and Architectural. AutoCAD currently supports a wide variety of file types, including DWG (drawing), DXF (2D drawing), DWF (2D drawing), LWP (laser printing), PDF (electronic version), 3D DWG, U3D (3D file), SVG, and many others. In September 2013,

---

AutoCAD had more than 6 million registered users worldwide and it was estimated that there were some 140 million active AutoCAD users in the world. The AutoCAD video below shows a featurette entitled "The History of AutoCAD" that was published in conjunction with the release of AutoCAD 2017 in December 2012. The video documents the development of AutoCAD and other Autodesk products, from the initial idea of a customizable structural design software package to the digital

**Document management:** Document management and file management are two separate services, although some products may include a mix of both. File management and the creation, indexing, and storage of files within a workspace, is

provided by objectARX. This API was first released as part of AutoLISP in 2002. ObjectARX allows users to: control the appearance and behavior of files (documents) use different methods of data storage (folder, database, etc.) control the behavior of objects within a document (e.g. objects are in sequential order or in random order) catalog the files (add metadata to a file such as title, creator, etc.) Modules Many of the functionality of Autodesk's products can be found in many of

AutoCAD Architecture: AutoCAD

---

Architecture, a component of Autodesk Architectural Desktop, was originally introduced as part of the Release 9 release of AutoCAD on November 7, 2001. It was designed to assist in the creation and editing of building design and construction documents. History AutoCAD Architecture was developed by Wavefront Technologies, Inc. After acquisition by Autodesk in 2005, it became the AutoCAD Architecture module. In 2005, Autodesk decided to rebrand the AutoCAD

product line. The product line was  
renamed to AutoCAD

you don't want to see this folder any more, you can hide it in the folder options. What you can do with it To install (Windows-only) To allow Autocad to run every time the computer starts you should move the Autocad folder to the startup folder. To run Autocad 2012 on Windows 7 & Windows 8 or newer The Autocad 2012 key is used for the 2013 product release. The 2012 products were originally created by Autodesk and rethemed/rereleased by Autodesk in 2012 as the 2012 series. In

Windows 8, as you may already know, a program is not allowed to run as a startup application.

Autodesk created a simple setup file named start.reg in the Autocad 2012 folder. This file will launch the Autocad 2012 when the computer starts. In Windows 7, the Autocad 2012 key is used for the 2013 product release. When you activate the Autocad 2012, it will not ask you for the product key. It will use the key that is contained in this installer file. You can use the key from your previous Autocad
