Saving projects Concepts and principles \* Save Projects as Folder (File/Save for Web), as described previously, can also be done as a folder of documents. If this is the case, you will find a single document named Save Project (Default). The Edit> \_Save in Project Folder\_ menu option enables you to save the project in a folder. This feature is activated in the bottom-left corner of the Photoshop window when the file is open. When you activate this menu item (as shown in Figure 2.2.1), you are presented with an options panel (Figure 2.2.2) similar to the one that appears when you click File>Save As in Photoshop. A new dialog box appears with the options to name the project, select a file type, and customize the save options. Once you select the file type that you want to use (JPEG or TIFF is recommended), click OK to begin saving the project. If you want to save the project in a folder, double-click the dialog box to open the File Explorer that you normally use to save

## Photoshop CC 2015

**Paint Bucket** This tool is used to paint over a specified area of an image. It is very commonly used to paint simple gradients over an entire image. The Smudge tool allows you to smear, smudge, or smudge-like a brush or rubber stamp. It can be used as an eraser, or for creating dark, smudgy or bold paintings. Eraser The Eraser tool allows you to erase any part of an image. You can erase small areas of an image or large areas of an image, depending on how much space you have available. Photoshop also provides a few different eraser shapes that can be used. The Scatter Brush allows you to remove any part of an image using a brush with a wide, or even random, angle, which means that you can remove information from an image without going through any complex editing. For the non-photoshop user, the Clone Stamp is a much simpler and easier tool to use than the Photoshop "clone brush" which is similar to the "eraser" feature of Photoshop. It is also safer to use than the "eraser" tool, as you never lose quality, as you might with the eraser tool. In a sense, it is a safer "eraser" than the Photoshop "eraser". Radial Filter This tool can be used as a way to blur an image. It usually covers large areas quickly and gives a very blurry effect, much like the Photoshop vignette effect. It can also be used to create a smooth looking "polaroid" effect. Soft Light Layers This tool can be used for many different things. It is mostly used for making the effect of light, as though it is coming from all directions at once. Other uses include lightening small areas of an image without lightening the entire area. Spot Healing Brush This tool is similar to the Eraser tool in Photoshop. It allows you to remove pixels or portions of pixels from an image, thereby healing damaged or corrupt images. It is also useful for recovering text or logos from images, as it allows you to pull the text back into the correct location. The Gradient tool lets you create a smooth gradient with colors that have different levels of opacity or brightness. There are also a few powerful gradient tools that are very useful for creating "old-timey" 

## What's New In Photoshop CC 2015?

Q: How to work with token in BotFramework web chat? I'm struggling with working with API tokens in Bot Framework and I really don't get it. I've got a test line of code in my bot that produces an ID token using the following: `Task.Run(async () => { using (var client = new HttpClient()) { using (var request = new HttpRequestMessage(HttpMethod.Get, "")) { request.Headers.Authorization = new AuthenticationHeaderValue("Bearer", "token_received_from_a_restapi"); var content = await client.SendAsync(request).Content.ReadAsStringAsync().ConfigureAwait(false); //Token = Content.EnsureDataHasValue(content); } } });` And then I'm writing it in my browser: `var serviceUrl = ""; var params = {}; params.from = "mybotname"; params.botState = "mybotname@mycompany.onmicrosoft.com"; params.application = "mybotname"; var content = $.ajax({ url: serviceUrl, type: "GET", data: params });` How do I use the token I got in my bot in the AJAX request I'm sending in my browser? A: First of all, if you are sending a GET request it should be a GET request, not a POST request. Secondly, be careful when dealing with tokens, tokens are very sensitive and should be handled properly. You need to send the token in the Authorization header as Bearer "{token}" (the {token} represents your token). The token should be encrypted if you are in production environment. Also, I am very sure that if you read the documentation on the Azure portal or GitHub repo, it says that you can not
