Steering wheel assemblies are conventionally designed to enable the driver to control one or more vehicle components by direct interaction with the steering wheel. In vehicles having airbag deployment capability, a steering wheel is desirably designed to deploy the airbag. When a driver of a vehicle is in a situation that results in a life-threatening accident, the driver may be unable to realize the presence of an airbag in a vehicle that is otherwise configured to deploy the airbag. Such situations, when a driver of a vehicle is not aware of the driver to reduce the probability of injury to the driver.
